Quick answers

The questions new students ask me most, answered in one page.

Does the course send me any materials?

No. Resin Profit Lab is **100% digital**: video lessons and illustrated guides, yours for life. **You buy your own supplies**, at a store near you or online, for about $20 to $25 to start.

What is the "$20 starter kit"?

It's **a shopping list, not a package**. Four things: a 16 oz resin kit, a mica set and a small mold. The list, with photos and prices, is in **Your $20 Starter Kit**.

What should I buy first?

Only those four things, plus a **12-inch tray mold and a heat gun** for your first piece to sell. Everything else waits for your first order: see Cost per Piece.

Where do I start?

In this order: **Start Here, Materials, Resin Basics, Your First Piece**, then The Order Queue Method and Order Queue Advanced. The piece guides come after.

A module is still locked. What do I do?

Modules open one after another so you're never overloaded. **The countdown shows when.** Meanwhile, repeat a practice pour: every keychain or coaster makes your next tray better.

How do I open a guide on my phone?

Tap **Open the guide** under the lesson. To keep it, on iPhone tap Share and **Save to Files**; on Android tap the download icon. It works without internet after that.

I live outside the US. Where do I buy?

Look for **"epoxy resin 1:1"** at your craft or hardware store. Where to Buy Supplies has a page for **the UK, Canada and Australia**, plus ounces and inches in metric.

Videos or guides?

Both teach the same steps. **Each guide has every step in writing and in photos**, so if a video goes too fast, follow the guide at your own pace.

◆ EMMA'S TIP

Stuck on a step? **Go back one page in the guide** and check the photo. Nine times out of ten the answer is in the step before.
